AI Is Already Here. So Now What?

The rules of building software have changed.

October 2026

DNOTIFIER

AI HAS CHANGED THE RULES

We are moving into a world where businesses will increasingly need automation. They will want to automate repetitive work, connect their systems, improve customer experiences, and build intelligent applications.

DNOTIFIER

And if businesses need automation, someone needs to build it.
The question is:

“who is going to build these systems, and what skills will they need?”

DNOTIFIER

Every Business Is Becoming an Automation Opportunity.

“The entire software industry from the Past 20+ Years, will eventually do the automation.”

DNOTIFIER

How to avail this opportunity?

"You should have a right skill set and you should be ready when the opportunity knock the door."

DNOTIFIER

How Did We Build Software Before AI?

1. FROM SCRATCH

- We used to build everything from Scratch. It was time consuming and tedious.

1. THROUGH FRAMEWORKS

- We started using frameworks, that reduced the rework and provided good business value.
